

## INTRODUCTION

For over 20 years, Caribou Software has been providing log procurement and payment solutions specifically designed for forestry companies throughout the supply chain.

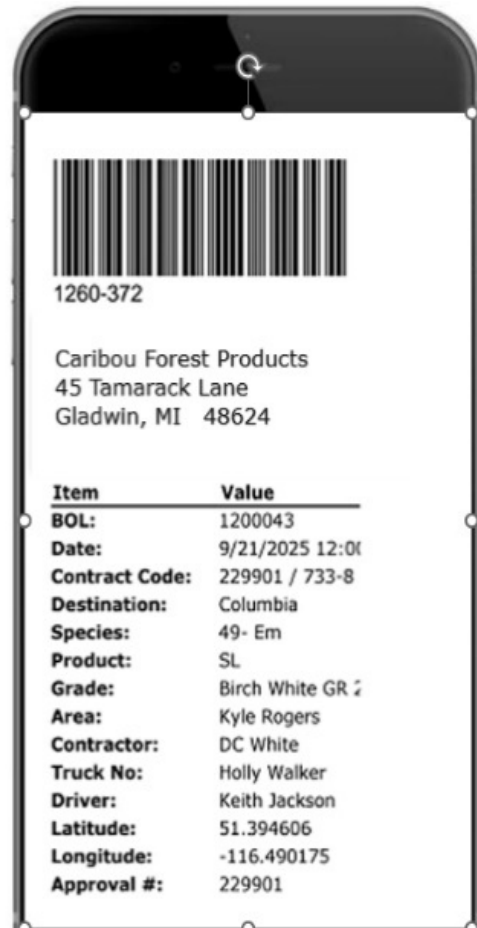

Logging contractors and truckers all across the US and Canada rely on Caribou's Logger's Edge load ticket management system to help them spend less time in the office and more time in the woods.

## GENERAL FEATURES, OPERATION, AND APPLICATION FOR LOGGERS

The Logger's Edge core contractor and landowner payment functionality is widely used by logging companies across the US to streamline ticket reconciliation, payment, and reporting processes. Its job costing capabilities also help logging companies to stay on top of the economics of their business, so that they can stay in business. **Caribou's solution is used by a number of former Loggers of the Year winners across the US, including Shamco Inc. -- the FRA 2025 National Outstanding Logger of the Year award winner.**

## TAKING CARIBOU INTO THE WOODS

For companies that are ready to take the leap to digitized load tickets, Caribou has developed an integrated digital load ticket app for loaders and self-loading trucks to use in the woods. While not all loggers are ready for that step, those that are can shave even more time and headaches from their office processes. It also automatically stamps each load with GPS coordinates and a timestamp as it is being loaded, to meet the increasing requirements associated with FSC, EUDR, and other industry compliance requirements.

**COMPLETING THE LOOP AT THE MILL**

Caribou also serves small to mid-sized sawmills with their Cutting Edge suite of products. This suite streamlines everything from log procurement/payment and rate/contract management process to weighing and / or scaling the logs and loads, to contractor/landowner payment, and raw material inventory and cost analysis.

Because Caribou’s solutions extend throughout the supply chain, they help all members of the forestry supply chain more readily share information digitally to “Close the Loop” from the woods to the mill.

Whether through daily digital load ticket information sharing via Excel exports, automated daily or weekly emails, or through Caribou’s web portal, Caribou allows subscribers to share data with multiple stakeholders, including loggers, truckers, landowners, and mills.

Caribou’s Web Portal receives load data from the digital app in real time (via Wi-Fi or cellular connection). This information allows participating mills to know what kinds of loads are on the way to the mill, and it allows landowners to access that same data to improve transparency for all stakeholders.

For mills that use Caribou’s W-Edge weigh scale solutions, the ticket’s unique identifier from the loadslip can be bar-coded and scanned directly at the receiving mills. This process not only helps trucks get in and out of the mill faster but also allows for immediate association with GPS Coordinates and the weights (or volumes, if the mill is measuring logs using Caribou’s log scaling solution). This way, all stakeholders have access to the information that is collected from the woods to the mill.

Finally, for mills that scale each log, Caribou’s new Android-based Log Scaling app integrates seamlessly with the Cutting-Edge payment system via wi-fi. If you are one of the many mills still limping along with antiquated, but mission-critical handheld devices and software built on technology that is no longer supported, Caribou can help you modernize this critical data collection process.

**Caribou Log Scaling Application**

**CONCLUSION**

If you’d like to learn more about whether Caribou’s solutions can help you streamline your business-critical data tracking needs, call 850-532-6206 x1, or visit [www.CaribouSoftware.com](http://www.CaribouSoftware.com).
